

ENPHYSYSSM Engineered PhytoremediationSM

TEA, Inc. takes a unique engineered approach to phytoremediation that we call *ENPHYSYSSM*. Typical phytoremediation systems simply rely on the vagaries of natural root development, which may limit the extent of the remedial effect. However, *ENPHYSYSSM* incorporates a patented technology called the *TreeWell[®]* system. This system is unique in that it manipulates the vegetation by promoting aggressive root development to the targeted area of concern.

TEA has implemented multiple Engineered Phytoremediation projects over the last ten years in the United States and Canada with outstanding results.

ADVANTAGES OF ENPHYSYSSM

- Treats contaminated soil and groundwater to depths of 30 feet (or more)
- Affects plume migration by hydraulically controlling groundwater at depths of 30 feet (or more)
- Treats specific horizons of soil and groundwater
- Treats DNAPL and similar contaminants by combining remedial strategies, such as adding EZVI to the TreeWell[®] System
- Cost effective
- Environmentally friendly - aesthetically appealing
- Widely accepted and approved treatment by the EPA and state environmental agencies across the U.S.
- Appropriate for most geographical locations
- Easily quantifiable
- Low maintenance
- Innovative, yet proven "green" technology
